

Cylinder wake, held-out Re 250 frame (val 300): 1% taps on u_x, u_y (mesh 238/field, grid 800/field); p UNOBSERVED -- POD infers it, IDW cannot (rel- $L_2=1$ by construction).
 Numbers: per-field rel- L_2 (z-units); physical-unit fields, truth-anchored row scales; generative panels: one posterior sample (K=8, member 0). *classical taps: same-seed CPU draw (approximate).
