

Wildfire LES, held-out snapshot: posterior from wind sensors only ($K=16$ ensemble); $\text{corr}(\text{std}, |\text{err}|) = 0.70$

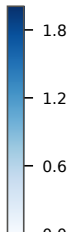

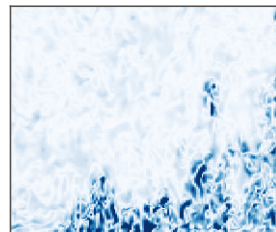

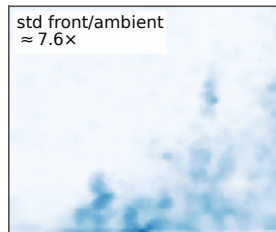

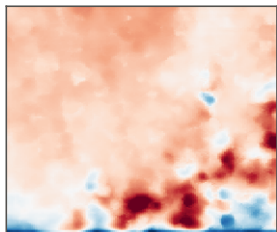

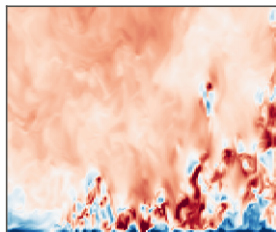

truth

posterior sample

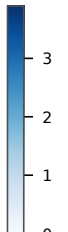

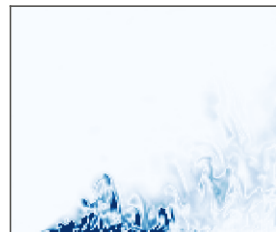

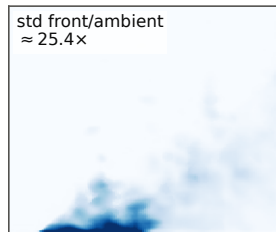

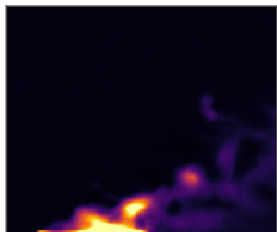

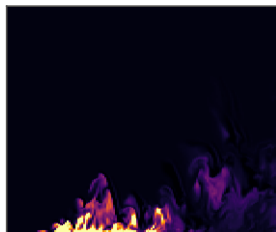

posterior std

$|\text{error}|$

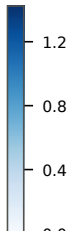

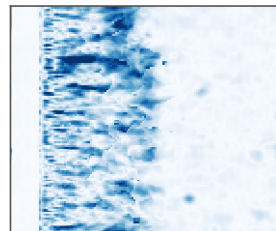

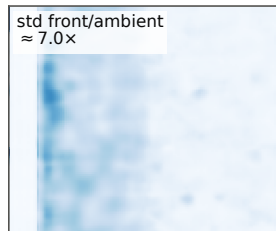

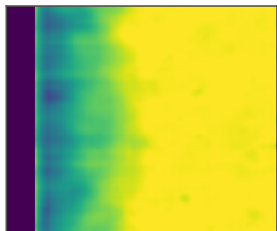

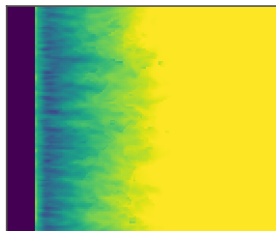

u (observed)
vertical slice $y = 58$

θ (unobserved)
vertical slice $y = 58$

ρ_f (unobserved)
fuel-bed plane $z = 1$

$|\text{error}| = |\text{posterior mean} - \text{truth}|$; sample shares the truth color scale; std and $|\text{error}|$ share one scale per row.
